

POLICE/ ISTAT

Police:

The Police's application generates a file with all guests' registration card details. These data are being daily sent to the Police Headquarter according to the Law's specifications. The file must be in the required format (.TXT) otherwise it will be rejected.

Istat:

ISTAT data are also generated daily and sent periodically (on a daily, weekly or monthly basis) to the Entity (APT, province or region) responsible to collect all the tourist data. Same as for the Police registration cards, the ISTAT file must be in the format required by the local Body (XML, TXT or via the webservice).

How it works

Police:

- NP checks the validity and completeness of the fields and generates the file to Police;
- NP converts the file to make it compliant with the specifications;
- The operator clicks on the "NP send to police" icon on the desktop to send to file webservices;
- The operator will receive a message with the outcome in the real time.

Istat:

- NP checks the validity and completeness of the fields and generates the file to Istat;
- NP converts the file to make it compliant with the specifications;
- The operator clicks on the "NP send to ISTAT" icon on the desktop to send to file webservices;
- The operator will receive a message with the outcome in the real time.
